ODOO DEVELOPER | Python · Odoo 14–19 · Integrations

5+ Yrs	Odoo 14–19	Odoo 18	8+
Odoo Development Experience	Builds, Customizations & Migrations	Certified — Odoo S.A. (2025)	Third-Party API Integrations

PROFESSIONAL SUMMARY

Odoo Developer with 5+ years designing, customizing and migrating Odoo 14–19 across manufacturing, retail, e-commerce and multi-company procurement. Hands-on across the full stack — Python/ORM custom module development, OWL/JavaScript front-ends, QWeb & XLSX reporting, and security via groups and record rules — with deep integration experience spanning Amazon SP-API, Shopify, Magento, eBay, Xero, SumUp, PhonePe and PAX payment terminals. Architected a reusable, domain-scoped approval & role-based-access engine now running on three Odoo 18/19 deployments, and served as principal developer on a multi-year MRP/PLM implementation (1,250+ commits). Delivers on Odoo.sh and on-premise with staging-first, regression-test-gated releases. Odoo 18 Certified.

WORK EXPERIENCE

Odoo Techno-Functional Consultant
January 2025 – Present

Theta Direct LLC — *Remote*

- **Own end-to-end Odoo 18/19 delivery for a multi-company group** — requirements discovery with procurement, finance and branch stakeholders, written functional specs with acceptance criteria, custom development, staging QA and release sign-off — working fully remote and async.
- **Architected a configurable approval engine** (approval types, rules, requests and request lines) with domain-scoped workflow definitions triggered through *base.automation*, so a single model carries different approval chains per record type (e.g., local vs. foreign purchase orders) and new document types onboard through configuration instead of code.
- **Retired 12+ legacy per-document approval modules** by writing a bridge module that reproduced the old flows on the new engine, enabling incremental cutover with zero downtime; the engine was backported to a second Odoo 18 codebase and reused on a third deployment.
- **Built a role-based access layer** structured as Roles → Permissions → Privileges on top of Odoo groups and record rules, with an audit-log and reason-capture mixin covering approvals, rejections and closures.
- **Modeled the full procurement chain** — material request → purchase request → purchase order — with company-scoped approver resolution and documented fallbacks, budget checks and multi-quotation comparison for foreign purchasing, PO splitting for local purchasing, and configurable goods-receipt tolerance checks on received quantities.
- **Principal developer on an engineered-to-order manufacturing codebase for a lighting manufacturer** (Odoo 18, 40+ custom modules): built manufacturing quality-check reports on production orders, BOM Excel/PLM reports with component low-stock visibility, a bulk production-planning dashboard with work-centre/MO status views and AI-assisted detection of attribute mismatches between sold and planned configurations, and a sales-order tracking dashboard covering production, delivery and invoice status.
- **Built a cut/conversion manufacturing flow for a building-materials group** (Odoo 19) that converts raw materials into sellable end products, re-deriving AVCO costs per conversion behind a gated approval workflow integrated with inventory valuation.
- **Developed volumetric warehouse-capacity tracking** (Odoo 19): per-location L×W×H dimensions with live occupied/available m^3 computed from package-type footprints and over-capacity alerts on receipt validation, plus a Documents smart button on manufacturing orders surfacing product drawings and attachments.
- **Developed a two-way Xero ↔ Odoo accounting sync** and a **PhonePe payment provider** built on Odoo 19's payment framework.
- **Hardened releases** with a CI regression-test gate protecting workflow rules, batched version upgrades and documented naming conventions and workflow reasoning for future maintainers.

Senior Odoo Developer
February 2024 – November 2024

BizzAppDev Systems Pvt. Ltd. — *Ahmedabad, India*

- **Led development across concurrent client projects** — requirement clarification, estimation and delivery planning, code reviews and client acceptance — while coordinating a developer team and mentoring juniors.
- **Principal developer on an engineered-to-order Manufacturing & PLM implementation** (Odoo 18, lighting manufacturer): guided BOM auto-generation driven by product-variant attributes so configured products generate their BOM instead of manual entry, BOM costing extended with additional costs and supplier discounts feeding accurate sale margins, and sale ↔ PLM approval flows with BOM reporting from the sales side.
- **Customized Odoo POS for retail**: integrated PAX card payment terminals through the IoT/*hw_drivers* layer with a custom hardware proxy, implemented weight-embedded barcode handling for scale-priced goods, and delivered custom receipt and Z-report designs plus an advanced POS reporting suite (OWL/JavaScript).
- **Diagnosed and resolved performance bottlenecks**, server errors and functional bugs through ORM query optimization, profiling and log analysis on Odoo.sh and on-premise servers.

Odoo Developer **September 2021 – February 2024**
BizzAppDev Systems Pvt. Ltd. *Ahmedabad, India*

- **Developed custom modules and extended core functionality** across Sales, Purchase, Inventory, Accounting, Website/eCommerce and POS — models, wizards, server and scheduled actions, QWeb PDF and XLSX reports.
- **Built REST and XML-RPC integrations** with Amazon, Shopify, Magento and eBay for order, product and inventory synchronization, including validation and error-handling layers for data consistency.
- **Implemented an Amazon FBA connector (SP-API)** centralizing inventory sync, order import and fulfillment tracking inside Odoo — replacing manual spreadsheet tracking and establishing Odoo as the single source of truth.
- **Delivered a SumUp payment provider** (Odoo 16–18) with API-based payment confirmation, automatic journal entries, partial/full refunds, and retry and error handling.
- **Executed version migrations across Odoo 14–17** and data migrations from third-party systems — porting custom modules, fixing deprecated views and APIs, and validating post-migration behavior.

SELECTED PROJECT HIGHLIGHTS

Workflow Studio — Approval & Access Platform · Odoo 18 · base.automation · Record Rules
Domain-scoped approval engine plus Roles → Permissions → Privileges access layer that replaced 12+ bespoke approval modules with one configurable product; includes audit logging and a legacy-flow migration bridge. Reused across three deployments.

Multi-Company Procurement Suite · Odoo 18/19 · Purchase · Inventory · Accounting
Material-request → purchase-request → PO chain with separate local/foreign flows, budget checks, multi-quotation comparison, goods-receipt tolerance checking, four procurement roles and CI-protected workflow rules.

Manufacturing & PLM Implementation · Odoo 18 · MRP · PLM · Quality · 1,250+ commits
Multi-year delivery for a lighting manufacturer: variant-driven BOM generation, extended BOM costing feeding sale margins, sale ↔ PLM approval flow, quality-check reporting, BOM Excel reports with component low-stock visibility, and production-planning and sales-order tracking dashboards with automatic attribute-mismatch detection.

Odoo Amazon FBA Connector · Odoo 18 · Amazon SP-API · Odoo.sh
Real-time inventory, order and fulfillment synchronization between Amazon FBA and Odoo with validation and error handling — eliminated manual reconciliation across Xero, Google Sheets and Amazon.

Retail POS with Payment Terminals & Scale Barcodes · Odoo 18 · OWL/JS · IoT · PAX
PAX terminal integration over Odoo's hardware-driver layer, weight-embedded barcodes for loose goods, barcode-driven stock operations, custom receipts, Z-reports and a POS reporting suite with low-stock alerts on the POS screen.

Payment & Accounting Integrations · Xero · SumUp · PhonePe · Odoo 19 Payment Framework
Two-way Xero ↔ Odoo financial sync; SumUp provider with refunds and automatic journal entries; PhonePe provider for the Indian market on Odoo 19.

TECHNICAL SKILLS

Odoo Development: Odoo 14–19 (Community & Enterprise), ORM & model design, XML views, wizards, server & scheduled actions, base.automation, security (groups, record rules, access rights), QWeb PDF & XLSX reports, OWL framework, Portal, POS framework, IoT / hw_drivers, Odoo Studio, module & data migration

Programming: Python (OOP), JavaScript, XML, SQL, HTML, CSS

Database: PostgreSQL

Integrations & APIs: REST, XML-RPC / JSON-RPC, Amazon SP-API, Shopify, Magento, eBay, Xero, SumUp, PhonePe, PAX payment terminals, Postman

Tools & Platforms: Odoo.sh, Git, Docker, Linux, Asana, CI regression gates

Delivery Practice: Requirements gathering & functional specs, QA/UAT, code review, performance debugging, technical documentation, user training

ODOO MODULES CUSTOMIZED

Sales · CRM · Purchase · Inventory · Barcode · Manufacturing (MRP) · PLM · Quality · Maintenance · Accounting · Invoicing · Point of Sale · Website · eCommerce · Payment Providers · Project · Timesheets · Helpdesk · Employees (HR) · Approvals · Contacts · Sign

EDUCATION

Bachelor of Engineering in Information Technology · CGPA 8.27/10 **2020**
Hasmukh Goswami College of Engineering *Gandhinagar, India*

CERTIFICATIONS

- **Odoo 18 Certified Consultant — Odoo S.A. (2025):** functional implementation and configuration across Sales, Purchase, Inventory, Manufacturing, CRM and Accounting; customization, migration and third-party integration.

AWARDS

Employee of the Year 2023–24 and **runner-up 2022–23** — BizzAppDev · **1st place**, inter-college coding competition
